Connection modes of the clamp for connecting galvanised round wire to reinforcing bar

Views not to scale

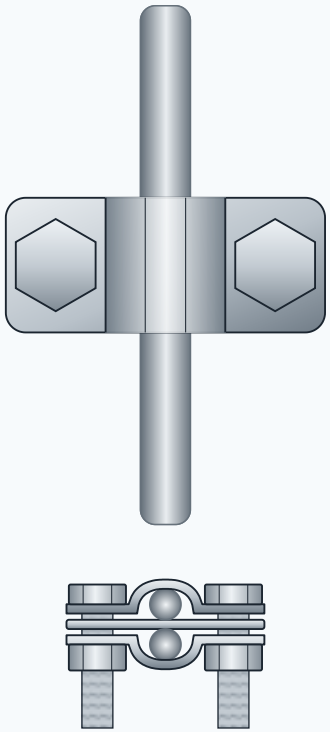

RRCG 1016

KALOT GROUP · TECHNICAL ILLUSTRATION · NOT TO SCALE

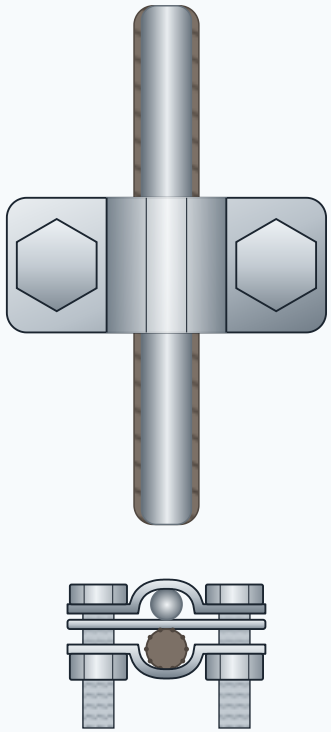

3. Wire and stainless steel earth rod

2. Two galvanised wires, side by side

1. Wire and reinforcing bar, in line

In all three modes the wire sits in the saddle of the top plate and the second conductor in the saddle of the bottom plate, with the flat middle plate between them; both conductors pass between the two bolts, in line or at a small angle. A galvanised wire to stainless steel earth rod joint is made and protected inside concrete or in a dry place above ground, never in soil. Top: plan view; bottom: front view. No copper conductor is used.
